

Real Estate Application

Internet access for the real estate developer field office

When a real estate developer is developing an area, a field office is needed. In most cases, such office will be some kind of temporary office, for example: a trailer office. Although the office is temporary, office staff still needs Internet access to finish their jobs. Normally you have choices among ADSL, leasing line, cable etc. But those choices could be a real problem.

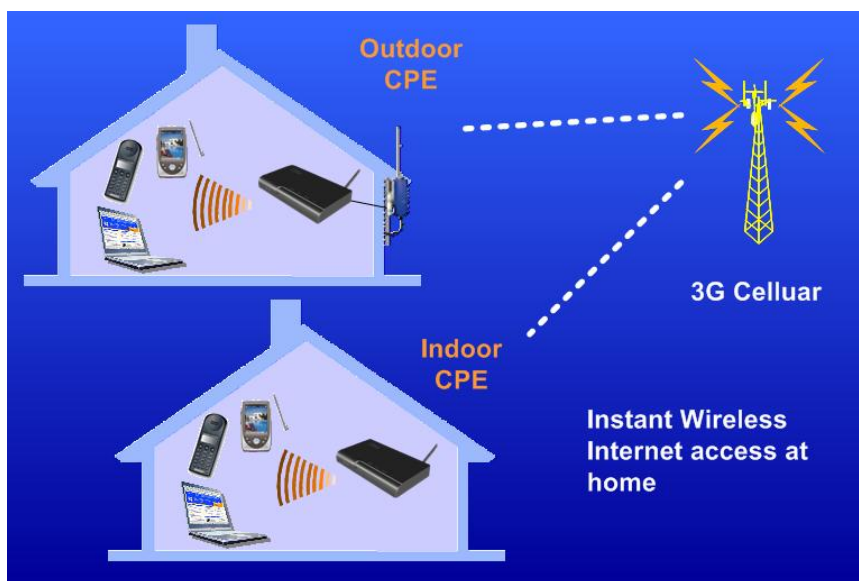

First, you need to propose your application to the local ISP; then you need to wait for a couple weeks for the process in the ISP, it may take much more time and money if unfortunately there is no existing Internet access facility in your area; at last, after you pay for the subscribe fee and installation fee, you can use internet. When you finish the developing job in this area and move to the next area, you will have to repeat the whole process again for this new area. That is really a time and money consuming process!

Why not considering the wireless Internet solution? Top Global MobileBridge™ enables instant, portable, broadband wireless Internet access. To set up such an Internet access, all you need are a 3G data card and power supply. Buy a 3G data card from cellular Operator, plug the card into MB6000 and power on MB6000, then you can go with wireless Internet in your trail. When you finish the developing job in one area, you just head to the next place and need to do nothing for the Internet access, it is portable!

MB6000 serves as a 3G gateway. It uses 3G networks to provide Internet access for the local area network. Computers and laptops can connect MB6000 through Ethernet or Wi-Fi. MB6000 brings the computers and laptops connected with it to the Internet through cellular networks.

Internet access for the new developed housing

Normally people will counter with the Internet access problem in a new developed area because of the immature telecom facility structure. Also developer may counter the same

problem when they want to set up a demo house to the potential buyer. Top Global MobileBridge™ is also an instant and cost effective solution for such situation. If the 3G network radio coverage is not good, Top Global has range extended antenna for boosting RF signal.
