

Wireless Residential solution is for residential users.

This solution is based on MobileBridge™, and it combines the best of Wi-Fi technology and 3G mobile communications technology. It leverages the existing and widely available 3G infrastructures with the flexible, low cost and simple to use Wi-Fi technology for every residential user.

This solution can provide broadband network access for all devices in home (e.g. computer, PDA, laptop, network game station etc.)

Residential Solution

Digital signage owners can put the digital signage to anywhere as long as the cellular signal is available. And because the connection is wireless, no network construction work is needed.

Benefits:

- Convenient. Minimal deployment and maintenance
- No network construction, remain home decoration
- Broadband network access
