

Different from staff service, Automated Teller Machine (ATMs) provides 24/7 financial service to customers, to satisfy their demands every day. So the availability of service is very important, and downtime caused by network accident will decrease customer satisfaction rate and mean loss of revenue for banks.

Top Global offers reliable, flexible and cost effective wireless ATM solution for banks. Base on 3G Kiosk Router (MB5000), this solution uses totally wireless technology to transfer data between ATM and bank. To meet the secure requirement for ATM, 3G Kiosk Router provides security features such as IPsec pass-through and Anti-Attack.

Wireless ATM Topology

Benefits:

- Fast and convenient network deployment
- Cost effective implement and operating
- Lowering the barrier for entry in a new location
- Service availability during wire link failure
- ATM can be relocated/moved easily
