

Top Global offers Wireless Hot Spot solution for mobile operators.

The Wireless Hot Spot solution is based on MobileBridge™, and it combines the best of Wi-Fi technology and 3G/4G mobile communications technology. It leverages the existing and widely available 3G/4G infrastructures with the flexible, low cost and simple to use Wi-Fi technology for rapid deployment of hot spots anywhere around the world.

The solution comes with a complete suite of software package including security, network management, and AAA (Authentication, Authorization, Accounting) features. By integrated RADIUS module, MobileBridge™ offers several possibilities for service charging. It can be based on service time, service traffic (e.g. Mbits), fixed monthly fee, scratch card etc.

Providing Wi-Fi service with 3G/4G infrastructure is a genuinely service, and MobileBridge™ offers an excellent opportunity for mobile operators to compete head-to-head with DSL provider in public Hot Spot area. Because of the widely available Wi-Fi terminals, the access service provided by MobileBridge™ is very attractive to business customers. This would not only increase the number of subscribers, but also increase the Average Revenue Per User (ARPU).

Wireless Hot Spot Solution

Application Scenarios

- Hot Spot services for venues where has no wired Internet access (e.g. historic buildings, outdoor environment etc.)
- Temporary applications (e.g. exhibitions, field conference, Hot Spot trails etc.)

Benefits:

- Expand hot spot coverage and increase user growth rate
- Increase ARPU
- Rapid deployment with minimal installation and maintenance
